

Flash XML Editor V2 *CDATA Editor Custom Interface*

Included Files:

- Actionscript Files
- Flash CS3 Files
- PHP Files

Important Notes Before you Upload

- ✓ The CDATA V2 Plugin uses system fonts as opposed to embedded fonts like in the standalone version. Because of this, "**use device fonts**" is enabled in the output text field.
- ✓ The list of CSS stylesheets and images will be read from folders named "**css**" and "**images**". These folders/paths must be relative to the V2 editor. The names and paths to these folders can be changed in **source > editor > MyPreview.as**. At the top of the file you'll see comments pointing you to where these paths are declared. Change the paths to whatever you like, save and republish "**cdataEditor.fla**".
- ✓ To deploy, upload the files you find in **deploy > ftpUpload** to the same folder that contains the V2 editor. Chances are this is at the root of your website. Next add the plugin from within the V2 interface. Please watch this video for a short demonstration:

Copyright Information

This plugin includes GreenSock's wonderful TweenMax engine for maximum performance. Please visit the link below to read about important GreenSock copyright information: <http://blog.greensock.com/tweenmaxas3/>

After visiting this link, click "Download AS3" to read the Copyright Agreement. After reading, no need to continue with the download as the files have already been included with your purchase.

GOOD LUCK USING THE PLUGIN!
